

Green Energy Guide For Business 2019

Why Should My Business Switch to Green Energy?

More than 50% of the UK's CO₂ emissions is produced by businesses. Energy is a necessity, we understand this, so we feel it is important that businesses consider that the energy they do consume comes from a renewable source.

Fossil fuels are harming the environment due to the release of greenhouse gases, and by the next century we will witness the extinction of many species and dramatic changes to our green spaces and coast lines.

Using renewable energy is a great way to make a positive difference and reduce the impact your business has on the environment.

Choose Clean Reporting with Zero Emission REGOs

What are REGOs?

REGO stands for Renewable Energy Guarantees of Origin. It certifies that the electricity purchased comes from a renewable source. One REGO is issued for each megawatt hour of renewable electricity generated.

The REGO scheme is administered by Ofgem and has been designed to increase transparency for consumers who wish to buy renewable energy.

We help industrial and commercial organisations with their greenhouse gas reporting.

With Pastel, all the electricity that your organisation uses will come with a zero-emission rating.

We will supply renewable energy backed by a 'guarantee of origin', certifying that your electricity has been generated exclusively through wind and hydro assets.

Our renewable energy capacity provides a real bonus for companies that must account for their Scope 2 emissions under the GHG Protocol Corporate Standards

What are the benefits of switching to renewable business energy?

Report zero emissions for Scope 2 purchased electricity

Reduce your organisation's carbon footprint

Demonstrate your commitment to renewable and sustainable goals

Enhance your reputation with customers and other stakeholders

Demonstrate best practice in your marketplace

What is Green Energy for Business?

- Green Energy is a reusable solution that comes from natural sources such as wind power, sea and sunlight. It is completely renewable and is naturally replenished and will never run out.
- Switching to reusable energy is a quick and simple solution to help in the fight against climate change.
- Historically the price of green energy was higher than energy sourced through fossil fuel. In 2019 this is no longer the case and many major energy suppliers price their green energy solutions at the same cost as brown energy.

And Why is it Important?

- In May 2019 the UK's parliament declared an Environment and Climate Emergency.
- Experts warn of a vanishing safety window for keeping global warming levels at a safe level.
- The UK must hit zero-carbon emissions by 2050 to slow down the damage already caused.
- Mankind will witness a decrease in land, vegetation, species and even extinction of our planet's inhabitants within the next century.
